CAREER OBJECTIVE

I don't have a single specific goal, but I do have a clear vision for my professional development. Both SEO and programming are key areas for me, which I intend to thoroughly develop.

My aim is to acquire the skills that will enable me to create innovative, optimized, and automated solutions that enhance the efficiency of my work and deliver tangible business benefits.

CURRICULUM VITAE

I was born on October 9th, 2000, in Śrem. In 2019, I graduated from KPALO (St. John Paul II High School) in Śrem, with a focus on mathematics, physics, computer science, and history.

My journey with web development began in middle school, where I first encountered HTML. Since then, I have continuously developed my skills in web technologies, gaining eight years of experience as a self-taught developer. I took my first steps in SEO in October 2021, initially without fully understanding what it entailed.

Today, I can confidently say that I feel like a fish in water in this field, passionately combining programming and SEO. Although these areas are different, I see many overlapping aspects, which drives me to further develop my skills in both domains.

In my free time, I enjoy delving into historical literature and playing strategy games. I also love kayaking and discovering less-known corners of Poland, which allow me to take a break from everyday challenges.

ACHIEVEMENTS SEO

The greatest success in the SEO field so far has been achieving nearly a 91% increase in clicks (approximately +42.5k) and impressions (approximately +845k) a year over the past three months.

Another significant achievement was the successful implementation of Consent Mode (Cookiebot), which contributed to better user consent management and optimized performance.

Building trust and relationships with clients was also a major success, resulting in their decisions to extend their cooperation and opt for higher service packages.

ACHIEVEMENTS WEB / FRONTEND DEV

- **Securing Client Websites:**
  With several years of experience in programming, I successfully identified and removed malware from several client websites, restoring their full functionality and security.
- **Website Performance Optimization:**
  By implementing Core Web Vitals recommendations, I improved a website's performance from 67% to 87%, which positively impacted user experience and SEO rankings.
- **Continuous Skill Development:**
  I continuously enhance my skills by learning new technologies, plugins, and programming languages, which allows me to stay adaptable to market demands and introduce innovative solutions.

BONUS WORKS

RadWEB
As part of the RadWEB project, which I run together with a few friends, we share knowledge and carry out projects related to web development and SEO. Until 2023, I managed the rad-web.pl website, and I am currently working on its comprehensive redevelopment.

My involvement in RadWEB has allowed me to gain experience in running SEO campaigns and creating websites and web applications.

Through this project, I have developed my technical skills, learned how to effectively collaborate with clients, understand their needs, and deliver solutions of the highest quality.

SEO + WWW
Mechanik Ludomy *mechanik-ludomy.pl*

The latest project where I built a website using NextJS 14 App Router. I am currently working on the textual content to prepare the site for an intensive SEO campaign.

SEO + WWW
Agromar agromar.site

A long-term client for whom I initially created a website based on GatsbyJS and DatoCMS. In the following years, after successfully convincing the client of the benefits of SEO, I rebuilt the site using the latest version of WordPress.

Thanks to RadWEB, I have gained a solid foundation in modern web technologies and SEO, which translates into successful projects and satisfied clients.
